What's more, there are more than 90 independent dealers moving lift truck equipment and materials handling equipment. This network helps Doosan Infracore America to aggressively compete in this competitive marketplace. The lift truck product line remarkably comprises of 63 different models consisting of 82 various battery and engine configurations of Electric-powered and Internal Combustion vehicles. Capacities of these various truck models vary from 3,000 to 33,000 lbs. All trucks are designed in an ISO 9001 qualified facility.

Doosan Infracore America is the fastest developing forklift and lift truck corporation in the North American market, due to its exceptional level of product performance and their consistently high level of client support and service given to all Doosan Infracore Forklift users. The U.S. forklift division based in Cleveland has a professional team knowledgeable in Product Sales, Purchasing, Advertising, Logistical and Technical Support.

Korea's initial home-based forklift marketplace was an open-import enterprise. In the 1960's, Korea Machinery Co. Ltd. started to import assembled forklifts as part of a nationwide machinery expansion project. Early sales of this industrialized equipment focused on large business groups, the armed forces and on state-run corporations. This ultimately led to a merger with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division commenced trade operations throughout Korea to service and sell this heavy equipment. By 1978, a forklift manufacturing plant was successfully completed. Continuous technical education grew to become the new focus for enhancing quality and product development.

Daewoo began the first home-based lift truck business in 1967, and rapidly gained a whopping 90% share in the Korean Materials Handling market. By the 1980's, Daewoo's sophisticated technological enhancements combined with sales success placed them in a situation of considerable expansion of their lift truck business.

Caterpillar Industrial Inc. of the U.S. in 1981, proposed a joint venture project to help them in the very competitive North American materials handling industry. This joint-venture proved highly successful for Daewoo and their lift truck sales expanded greatly. In 1984, the company finished development of a new facility to help in producing high end value-added products for export. In 1993, the corporation had a international sales network and started exporting models they had developed through in-house technology, as an independent product. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing expansion opportunities into international markets.
